EDUCATION

University of Southern California, Viterbi School of Engineering, Los Angeles, CA

May 2026

Bachelor of Science, Computer Science and Business Administration

GPA: 3.51 | Cum Laude

Relevant Coursework: Data Structures and Algorithms, Software Development, iOS and Android App Development

TECHNICAL SKILLS

Web & E-Commerce: JavaScript, TypeScript, React, Next.js, Node.js, HTML/CSS, Responsive Design, Shopify APIs/Webhooks, REST APIs, JSON

Programming: Java, Python, C++, SQLDatabases: MongoDB, MySQL, SQLite, Firebase, Firestore

Tools & Practices: Git, GitHub, Postman, Docker, JUnit, unit testing, QA & Testing, debugging, object-oriented programming, Agile development

APIs: Shopify APIs/Webhooks, OpenAI API, Google Maps API, OpenWeatherMap API

Languages: English and Mandarin Chinese (Fluent)

TECHNICAL PROJECTS

Multi-Vendor E-Commerce Platform – USC CSCI 401 Capstone Project, Full-Stack Developer

May 2026

React, Next.js, TypeScript, Node.js, MongoDB, Shopify APIs/Webhooks

- Built and QA-tested Shopify API integrations for product, variant, inventory, and checkout workflows; debugged and resolved a checkout-blocking failure caused by stale variant records.
- Designed a responsive customer-facing favorites interface in React with drag, pan, zoom, resize, and debounced API persistence, translating design mockups into functional application features.
- Refactored product filtering into controlled React components with session-based persistence, improving filter behavior and synchronizing stock labels with Shopify inventory data.
- Built vendor post-purchase workflows for order splitting, shipping lifecycle tracking, and returns management across 9 REST API endpoints and 4 MongoDB schemas.
- Collaborated with backend and design teammates through GitHub and biweekly client meetings to deliver features compatible with existing checkout, payment, inventory, and order workflows.

Full-Stack Weather Web Application

Oct. 2024

Java, Java Servlets, MySQL, REST APIs, JSON, JDBC

- Developed a Java Servlet web application integrating OpenWeatherMap and Google Maps REST APIs to retrieve, process, and display real-time weather and location data.
- Implemented user authentication, search-history persistence, dynamic rendering, weather search, and location-based functionality backed by MySQL.
- Improved application reliability through input validation, exception handling, and database integration.

ChatPet Android Application

Dec. 2025

Java, Android, Firebase, Firestore, OpenAI API, JUnit, Git

- Developed authentication, persistent application state, AI chat, and interactive gameplay features in a team-built Java application backed by Firebase and Firestore.
- Wrote JUnit tests, validated functional and edge-case behavior, and debugged failures across integrated components during iterative Agile development.

EXPERIENCE

USC Technology and Applied Computing, Los Angeles, CA, *Technology Support Assistant*

June 2025 - May 2026

- Triageed and resolved 20+ weekly hardware, software, and system requests across in-person, phone, and email channels, adapting technical guidance to users with different experience levels.
- Managed deployment, inventory, and readiness records for 100+ loaner devices while following established checkout and support procedures.
- Documented repeatable resolutions and escalated unresolved technical issues to appropriate staff, building shared troubleshooting knowledge and supporting consistent maintenance workflows.
