EDUCATION

University of Southern California, Viterbi School of Engineering, Los Angeles, CA
Master of Science, Computer Science – Starting Spring 2027

Expected Dec. 2028

University of Southern California, Viterbi School of Engineering, Los Angeles, CA
Bachelor of Science, Computer Science and Business Administration
GPA: 3.51 | Cum Laude

Aug. 2023 – May 2026

Relevant Coursework: Data Structures and Algorithms, Software Development, iOS and Android App Development

TECHNICAL SKILLS

Programming: TypeScript, JavaScript, Python, Java, C++, SQL, Swift, HTML/CSS

Web & Mobile: React, Next.js, Node.js, Android, SwiftUI, Java Servlets, JDBC, REST APIs

Data & Platforms: MongoDB, MySQL, SQLite, Firebase, Firestore, pandas, Streamlit, Plotly

Tools & Testing: Git, GitHub, Docker, Linux, Postman, JUnit, Unit Testing, API Testing, Agile Development

Languages: English and Mandarin Chinese (Fluent)

TECHNICAL PROJECTS

Multi-Vendor E-Commerce Platform | USC CSCI 401 Capstone Project

May 2026

React, Next.js, TypeScript, Node.js, MongoDB, Shopify APIs/Webhooks

- Developed vendor-specific order processing, shipping, delivery, return, and refund workflows across 9 REST API endpoints and 4 MongoDB schemas for a multi-vendor marketplace.
- Debugged a checkout-blocking Shopify integration failure caused by stale product variant data, implementing retry-and-skip handling to prevent invalid records from interrupting checkout.
- Built an interactive React favorites canvas with drag, pan, zoom, and resize functionality, using debounced API persistence to synchronize user interactions with saved data.
- Collaborated via GitHub/Slack and biweekly client meetings to align requirements and integrate features.

ChatPet Android Application

Dec. 2025

Java, Android, Firebase, Firestore, OpenAI API, JUnit, Git

- Developed Java Android application features integrating Firebase Authentication, Firestore, and the OpenAI API to support user accounts, persistent application state, AI chat, and interactive gameplay.
- Implemented JUnit tests covering functional and edge-case behavior, debugging integration failures across application components during iterative Agile development.

Full-Stack Weather Web Application

Nov. 2024

Java, Java Servlets, MySQL, REST APIs, JSON, JDBC

- Developed a Java Servlet web application integrating OpenWeatherMap and Google Maps REST APIs to retrieve, process, and display weather and location data.
- Implemented user authentication and persistent search history using MySQL and JDBC, with input validation and exception handling to improve application reliability.

FocusFlow | Music & Calendar Data Visualization Dashboard

May 2026

Python, pandas, Spotify Web API, Google Calendar API, SQLite, Streamlit, Plotly

- Developed a Python ETL pipeline integrating Spotify and Google Calendar APIs to retrieve, transform, and store music listening and schedule data in SQLite.
- Built an interactive Streamlit dashboard with Plotly visualizations to explore listening patterns across calendar activities, genres, days, and times.

EXPERIENCE

USC Technology and Applied Computing, Los Angeles, CA, *Technology Support Assistant*

June 2025 – May 2026

- Triaged and resolved 10+ weekly hardware, software, and system requests, isolating technical issues and adapting guidance to users with varying experience.
- Diagnosed recurring hardware, software, and system problems and documented repeatable resolutions to support consistent troubleshooting.
- Managed deployment, inventory, quality checks, and readiness records for 70+ loaner devices while following established operational procedures.
